# TEKKO® PRO

## Insect Growth Regulator Concentrate

Tekko™ Pro contains a Juvenile Hormone Analog (JHA): Pyriproxyfen and a Chitin Synthesis Inhibitor (CSI): Novaluron. Tekko Pro is a groundbreaking combination insect growth regulator that disrupts the life cycle of listed insects, preventing them from developing into adults.

- For indoor or outdoor use
- Inhibits re-infestation of fleas for up to seven months
- For use on furniture, carpets, kennels

### Tekko Pro Profile

<b>Formulation</b>	Liquid Concentrate
<b>Effective Against</b>	Ants, Crickets, Fleas, Flies, Gnats, Mosquitoes, Roaches
<b>Active Ingredients</b>	1.3% Pyriproxyfen 1.3% Novaluron
<b>Packaging</b>	6 x 16 fl oz (90 cases/pallet)
<b>Application Rates</b>	See label for specific uses and rates
<b>Mode of Action</b>	Pyriproxyfen is a Juvenile Hormone Analog which prolongs the immature state of the insect so that it does not become a reproductive adult. Novaluron is a Chitin Synthesis Inhibitor which blocks the insects ability to molt due to inhibition of the synthesis of a new cuticle. In some cases, such as roaches, Chitin Synthesis Inhibition shows adulticide action. Combining both IGRs creates a synergistic affect resulting in early nymph control and death.
<b>Signal Word</b>	Caution
